A country call code is a unique number that is used to identify a particular country. When you are dialing an international phone number, you must first dial the country call code for the country you are calling.

For example, the country call code for the United States is 1. So, if you are calling a phone number in the United States from another country, you would dial 1 + the area code + the phone number.

You can find a list of country call codes on the website of the International Telecommunication Union (ITU).

### **International Dialing Prefixes**

An international dialing prefix is a number that you must dial before the country call code when you are making an international call.

The most common international dialing prefix is 00. However, some countries use different prefixes, such as 011 or 0011.

You can find the international dialing prefix for your country on the website of your local telephone service provider.
